Inside ANCS Platform

Explore the core modules of ANCS, from network configuration management to AI-powered automation and intelligent topology analysis.

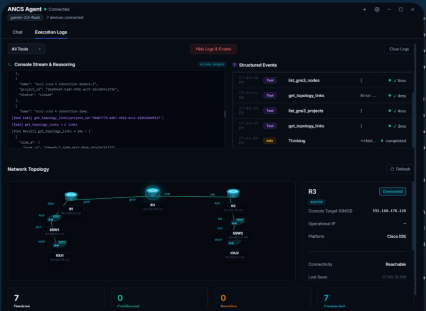

Main Network Manager

The central workspace for network engineers. Discover devices, generate configurations, deploy changes, manage templates, perform subnet calculations and monitor network operations from a unified dashboard.

AI Copilot Assistant

ANCS AI Copilot connects directly to GNS3 projects and network devices. Engineers can interact using natural language to discover topology information, generate configurations, troubleshoot issues, audit security settings and automate deployments.

Execution Logs & Topology Intelligence

Monitor tool execution, AI reasoning workflows, structured events and real-time topology analysis. ANCS provides complete visibility into every operation performed by the AI agent.
